A little practice

One idea. Five minutes.

Practice together after you watch. Try either one if you'd like.
Talk, write or draw—make it playful.

1. Sort it

Water, a winter coat, candy, and a video game.
Which of these are needs? Which are wants?

2. Try this

You have $12. Lunch costs $5, and a comic book costs $9.
Which do you pay for first, and how much is left?

Answers for parents

These notes go with the practice page.
Skip either prompt or stop whenever you like—there's no score to aim for.

A need is something you must have to stay safe and healthy.
A want is something that is nice to have, but you can live without it.
Wants are not bad. When money is limited, needs come first.

1. Sort it

Water and a winter coat are needs. Candy and a video game are wants.

2. Try this

Lunch is the need, so pay for it first.
$12 − $5 = $7 left to save toward the comic book.

$5 + $9 = $14, which is more than $12, so you can't buy both.
$7 is not enough for the $9 comic book yet.

If you'd like to keep talking

Some things can be a little of both. Shoes for school are a need.
Fancy shoes with flashing lights are a want.
The need is the shoes. The extra fancy part is the want.

A note for grown-ups

If you print this page, keep it separate so answers stay out of sight. Keep children's personal details off shared pages. Grown-ups should supervise any real buying, selling or sharing of personal information. This page is for education, not personalized financial, investment, tax or legal advice.
